1. The following is an examiner's statement of reasons for allowance: It is noted that the specification does not describe a "structure for resisting rotation when not desired", however the drawings do show a structure with flattened side portions in figures 7A-7C (the elected embodiment) and applicant now claims in claim 38 that the flattened side portions are the structure which resists rotation. The Examiner has considered the structure claimed in claim 37 to be referring to the flattened side portions shown in figures 7A-7C and since no such structure is shown in the prior art in combination with the other positively recited structures, the claim is considered patentable over the prior art of record. It is also noted that on page 28 reference is made to a second embodiment/species of structure to resist rotation comprising a conventional internal ratchet mechanism that may be used to resist undesired twisting, and it is noted that applicant has claimed this embodiment in claims 58 and 59.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. The following changes to the drawings have been approved by the examiner and agreed upon by applicant: a new drawing similar to figure 7C with the conventional ratchet system which is described on page 28 of the specification and which is claimed in claims 58 and 59 is required. In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.
